

These templates are in Word, and sized at 8.5"x11".

If you add your own pictures, you need to click on "Wrap text" and choose "behind text" so that you can move the picture wherever you want.

If you want to add a bar of color, insert a shape and choose a style (fill, border, etc). If you need more help using Word for design, download the free package at www.diybookcovers.com

You should probably add an ISBN and price if you have them ready. If you want to add a Google QR code (that box-shaped barcode) you can use a generator like this: <http://www.qrstuff.com>

You may want a 3D image of your book... in Word you can choose some 3D options that make it stand out. I also made a 3D book generator tool, which is on my website here:

<http://bookcovers.creativindie.com/free-online-3d-book-cover-generator>

If you don't have a back and spine, just upload your cover 3 times for the 3 options; then you can rotate the book and save the PNG or JPG; after you make a choice, the final 3D image will appear, which you can right click and 'save-as'.

However, an annoying little logo gets put up in the top left corner... if you have a screen capture software like Snagit, take a picture of the image and save it before clicking on the PNG/JPG/GIF options to avoid the logo.

Choose a cover:
